ABSTRACT

The abstract should be written in English. It must be formatted in Arial font, size 10 pt, single-spaced, and presented as a single paragraph. The title of the abstract should be centered, written in uppercase letters, 10 pt, and in bold. Avoid using abbreviations, unless they are universally recognized (e.g., DNA). Do not include references or citations in the abstract. Present the research methods and results in a narrative form, without the use of numbering or bullet points.

All author emails

1. Introduction

Introduction should begin with an overview of the research problem, outlining the issue or topic that the study addresses. Following this, the research focus or problem should be clearly defined, specifying the particular area or question the study aims to explore. In terms of formatting, the introduction must be written in Arial font, size 11 pt, with 1.15 line spacing. Each paragraph should have the first line indented by 1 tab, equivalent to five characters. The title of the introduction should be in uppercase letters, using Arial font, size 11 pt, and bold.

2. Styles and Formats

Files must be in MS Word only and should be formatted for direct printing, using the CRC MS Word provided. Please follow the prescribed styles and formatting guidelines outlined in this manuscript for titles, text, figures, and tables. Specific examples are provided below.

2.1 Subsection title

2.1.1 Sub subsection

2.1 Method and result format

Arial font, size 11 pt, with 1.15 line spacing and clearly describe research stages and finding without theoretical studies. The results section must concisely summarize collected data formatted in minimal subheadings.

2.2 Figure and table

Tables and figures should be simple and not overly complicated. They should be numbered sequentially and referenced in the text. The use of color in tables and figures should be avoided; instead, use shading or black-and-white formats to ensure clarity. Each table should include a brief, clear title, placed at the top of the table, aligned at the center. It is essential that data in tables and figures are not repeated in the narrative text. Instead, focus on explaining and interpreting the data, rather than narrating the numbers. For instance, avoid expressions like "Table 5 shows..." or "Table 5 above...", and instead refer to the data as "... (Table 5)".....

Example Table:

Table 1. Student learning outcomes of experimental and control classes					
It	Assessment Items	Experimental Classes		Control Classes	
		<i>Pretest</i>	<i>Posttes</i>	<i>Pretest</i>	<i>Posttes</i>
			<i>t</i>		<i>t</i>
1	Lowest student grades	31	96	31	50
2	Highest student score	69	73	69	88
3	Average learning outcomes	48,16	86,05	49,5	73,55
4	<i>N-gain</i>	0,733		0,47	

Images should be numbered sequentially and placed with their titles centered at the bottom. Visuals should be clear and simple, avoiding unnecessary complexity, and should not be overly large. The information presented in the images should be relevant to the research findings, ensuring they contribute effectively to the reader's understanding of the results. Example image:

Figure 1. Main menu on m-learning

2.3 Equations

Authors are advised to utilize either the Microsoft Equation Editor or the MathType for composing equations. The following is an example of an equation:

$$Ax = b \quad (1)$$

3. Conclusion

The conclusion should be written in a concise narrative form. It is important that the conclusion does not include any numbered or bulleted lists, and instead is presented as a coherent narrative that encapsulates the core findings of the study. Rather than merely repeating the results of the research, the conclusion should focus on synthesizing the essence of the entire study.

Acknowledgments

The Acknowledgments section provides an opportunity for authors to express gratitude to individuals, organizations, or institutions that have contributed to the research. This may include funding agencies, colleagues, mentors, or anyone who has provided significant support in the form of technical assistance, data collection, manuscript review, or other contributions that do not meet the criteria for authorship. Acknowledgments should be concise and professional, specifying the nature of the support received.

Conflicts of Interest

Declare conflicts of interest or state "The authors declare no conflict of interest regarding the publication of the paper." Authors must identify and declare any personal circumstances or interest that may be perceived as inappropriately influencing the representation or interpretation of reported research results. Any role of the funders in the design of the study; in the collection, analyses or interpretation of data; in the writing of the manuscript, or in the decision to publish the results must be declared in this section. If there is no role, please state "The funders had no role in the design of

the study; in the collection, analyses, or interpretation of data; in the writing of the manuscript, or in the decision to publish the results”.

Appendix A

This section provides additional content that supports the main manuscript but is not essential to its core discussion. This section may include extended datasets, detailed methodologies, supplementary tables or figures, questionnaires, coding scripts, or other materials that enhance the understanding of the research. All appendix sections must be cited in the main text.

References

References must be written in accordance with the APA format, with single line spacing. All references should be carefully formatted to ensure consistency and accuracy, adhering to the specific guidelines set by the APA style, including proper citation of authors, titles, and publication details. To ensure consistency and avoid errors, authors are encouraged to use reference management software such as Mendeley, EndNote, or Zotero. All cited works must be properly acknowledged within the manuscript to uphold academic integrity and rigor. The procedure for writing references is as follows:
